JavaScript, Typescript, Vue, AngularJS, Ruby, Ruby on Rails, React, Redux, HTML, CSS, SCSS, Three.js, Mongoose, MongoDB, Node.js, Express.js, SQL, SQLite3, PostgreSQL, Jest, Cypress, Amazon Web Services, Webpack, jQuery, Git, Heroku, Procreate, Adobe Premier, Photoshop & Lightroom

Experience

Fullstack Software Engineer | Jan 2022 - Nov 2022

Lithic, New York, NY

- Built a series of reusable components for our B2C product to serve as a platform for running user experiments which served as a foundation for the following year's roadmap.
- Led a project to create new internal tooling functionality that enabled the support team to serve customers more efficiently and worked proactively with my team to define and deliver value within a set timeline.
- Proactively improved and implemented testing, documentation, processes, system monitoring and build tooling for systems owned by the team which resulted in increased productivity.
- Participated in the Product Engineering Team on-call rotation and conducted interviews for prospecting new hires.

Email Marketing Manager/ Fulfillment Associate | June 2019 - Nov 2019

Beyond The Streets, New York, NY

- Booked, coordinated and facilitated approximately 8-15 guided tours a week for showings of the exhibit.
- Managed the company's email accounts by responding to 50+ customer and buyer inquiries daily.
- Assisted and accelerated the fulfillment of 100+ online orders and art pieces for buyers on a weekly basis.

Projects

9Lives   live site | github

JavaScript, Three.js, HTML5 , CSS3 , Webpack , Vectary

A third person video game / experience where you are playing as a ghost cat wandering through a forest. The objective is to collect all of your nine 'lives' or hearts so that you can come back to life.

- Incorporated key inputs in JavaScript to allow for an enjoyable sensation of character movement for the user.
- Utilized OOP (Object Oriented Programming) to provide cleaner and more readable code.

Spelled   live site | github

JavaScript , React / Redux , Ruby on Rails , postgreSQL , CSS3 , AWS , Heroku , Webpack

A clone of the luxury fashion ecommerce website Grailed, where instead of selling menswear, users can sell and 'purchase' Magic the Gathering cards.

- Established multiple fully interactive CRUD functionalities including users, listings and comments.
- Created single-page, responsive web application in accordance with user-friendly, professional design.
- Managed postgreSQL database storage and Redux state to pass information between the backend and frontend in prompt manner to enable a seamless user experience.

any Wajers?   live site | github

JavaScript , React / Redux , Node.js , Express , MongoDB , Mongoose, CSS3 , Heroku

any Wajers? is a social media website where users can go to meet others to play the games they love.

- Leveraged ES6 syntax and object-oriented programming (OOP) paradigm to develop DRY, modular code.
- Collaborated with teammates to concept, design, implement, and deploy a MERN full-stack web application.
- Utilized Express and MongoDB to maintain and update information in the database.

Education

App Academy | Fall 2021 | New York, NY

1000+ hour software development course with focus on full stack web development and a 3% acceptance rate

New York University | Spring 2021 | New York, NY

BA Philosophy, Minor in Mathematics & Studio Art
