SKILLS

Prompt Engineering, Prompt Chaining, Agentic System Design, LLM API Integration (OpenAI, Microsoft Azure), Helicone, JavaScript, TypeScript, React, Redux, Vue, AngularJS, HTML, CSS/SCSS, Three.js, Storybook, Node.js, Express.js, Ruby on Rails, GraphQL, Apollo, SQL (PostgreSQL, SQLite3), MongoDB, Mongoose, Jest, Cypress, Playwright, AWS, Docker, Jenkins, Git, Heroku, Doppler, Sentry, Grafana, BigQuery, Growthbook, Mixpanel, Metabase, Jira, Linear, Notion, Webpack, jQuery

EXPERIENCE

AI Product Engineer II | July 2024 - Current

AI Product Engineer I | Oct 2023 - July 2024

QA Wolf, New York, NY

- Designed and maintained a reporting platform for our Agentic System test results, enabling developers, QAs, and stakeholders to track system health daily, reducing debugging time and increasing visibility into failures.
- Led the development of an AI system to autonomously generate end-to-end test suite outlines, which allowed us to hit our quarterly goal of achieving 75% of automation for all Sales Engineering requests, in turn improving Sales Engineer workflow efficiency by 60%.
- Partnered closely with cross-functional teams to gather feedback, rapidly iterate on AI outputs, and deliver solutions aligned with user needs, increasing adoption and reducing manual effort.
- Improved reliability and adoption of AI-driven workflows by refining prompts, fixing system failures, and introducing automated validation tests, turning an underperforming feature into a trusted, widely used tool.
- Expanded core platform capabilities by shipping new agentic actions, implementing autonomy modes for our AI chatbot end to end, and contributing to the platform migration across frontend and backend systems.

QA Engineer | June 2023 - Oct 2023

QA Wolf, New York, NY

- Owned the development and establishment of comprehensive test plans and strategies for 10 onboarding customer platforms to ensure effective test coverage.
- Executed daily test suite triage for 35+ customer platforms and 7000+ tests utilizing a variety of defect tracking tools to log, prioritize, and monitor the status of identified issues.
- Implemented and maintained automated test scripts, and client-specific test environments that accurately mirrored production systems improving test efficiency and reliability.
- Delivered dedicated quality assurance support and orchestrated routine client meetings for a diverse client portfolio, ensuring the effective fulfillment of their testing requirements while aligning with their expectations.

Fullstack Software Engineer | Jan 2022 - Dec 2022

Lithic, New York, NY

- Built a series of reusable components for our B2C product to act as a platform for running user experiments, where the results of the experiments served as the foundation for the following year's product roadmap.
- Led a project to create new internal tooling functionality that enabled the support team to serve customers more efficiently and worked proactively with my team to define and deliver value within a set timeline.
- Proactively improved and implemented testing, documentation, processes, system monitoring and build tooling for systems owned by the team which resulted in increased productivity.
- Participated in the Product Engineering Team on-call rotation which consisted of leading daily standup meetings, managing production activities for the 2 customer facing applications and the internal tooling system, triaging and creating post-mortems for incidents, and acting as the point engineer for all support related issues.

EDUCATION

App Academy | Full-Stack software development course

Fall 2021 | New York, NY

New York University | BA Philosophy, Minor in Mathematics & Studio Art

Spring 2021 | New York, NY
