EXPERIENCE

Senior AI Product Engineer | Feb 2026 - Present

AI Product Engineer II | July 2024 - Feb 2026

AI Product Engineer I | Oct 2023 - July 2024

QA Wolf, New York, NY

- Led QA Wolf 3.0 auto-creation, the company's initiative to build an AI agent that autonomously creates end-to-end tests for its next-generation platform, scaling the agent to independently create 44 of 88 target flows and advancing the initiative into its bulk auto-creation phase.
- Re-architected the agent's autonomous test-plan creation pipeline, increasing throughput by 42% (3.69 → 5.25 tests/min) and benchmarking it at 2.5× faster with 3× fewer actions than Claude Code and Playwright MCP.
- Engineered Guided Mapping, an AI-powered coverage mapping workflow, end-to-end, enabling customers to translate their existing test plans into agent-generated test outlines and automatically identify missing test coverage, adopted by 5 customers within weeks of launch.
- Developed Autonomous Mapping, an agentic workflow that independently explores customer applications and generates test coverage, automating 75% of Sales Engineering requests and reducing workflow effort by 60%.
- Built an automated reporting and observability platform for agentic system evaluations, enabling real-time health monitoring across engineering teams and reducing debugging time by over 50%.
- Shipped file upload and download capabilities for AI workflows end-to-end in 2 weeks, enabling the agent to ingest and generate files and unblocking critical Sales Engineering workflows.

QA Engineer | June 2023 - Oct 2023

QA Wolf, New York, NY

- Owned test strategy and coverage for 10 customer onboarding engagements, designing test plans tailored to each platform's critical workflows.
- Triageed daily results across 7,000+ automated tests and 35+ customer platforms, prioritizing defects and maintaining test infrastructure to improve reliability at scale.

Fullstack Software Engineer | Jan 2022 - Dec 2022

Lithic, New York, NY

- Built reusable experimentation infrastructure for Lithic's B2C product, enabling rapid user experiments that informed the following year's product roadmap.
- Developed internal tooling that streamlined customer support workflows, owning the project from requirements and scoping through implementation and launch.
- Improved testing, documentation, monitoring, and build tooling across team-owned systems, increasing developer productivity and system reliability.

SKILLS

Core Stack: TypeScript, JavaScript, React, Vue, AngularJS, Next.js, Node.js, Express, Ruby on Rails, GraphQL, PostgreSQL, MongoDB, tRPC

AI & Systems: Agentic System Design, Multi-Agent Workflows, Prompt Engineering & Chaining, LLM Skill Design, LLM API Integration (OpenAI, Azure, Anthropic)

Tools & Infra: Jest, Cypress, Playwright, AWS, Docker, Jenkins, Argo CD, Sentry, Grafana, GCS, BigQuery, Growthbook, Mixpanel, Metabase, Storybook, Braintrust

EDUCATION

App Academy | Full-Stack Software Engineering Program

Fall 2021 | New York, NY

New York University | B.A. Philosophy, Minors in Mathematics & Studio Art

Spring 2021 | New York, NY
